Project 31: Rock Creek Curling

Meeting 18 Minutes

Date: Thursday November 5th, 5:00-5:30 pm
Attendees: Brooke Nelson, Brooke Seifert, Katie Miller, George Bauer, Christian Mesa, Jaron Barret, DJ
Missing: *N/A*
Upcoming meetings: Tuesday November 10th, 3:30-4:30 pm

Key Discussion Points:

- CV:
    - Curling shot analysis pipeline from game query to web app
    - ID based on Sheet, Date, and Time
    - Talked to Andy about the unwarping first or after, he said chose one and run with it
- UI:
    - Have connected the calendar with the API, now showing actual games, these were made into buttons
    - Loading page necessary considering what we learned from Andy
- Discussion with DJ:
    - DJ advises to perspective changes prior, this means we need to retrain the model
    - Thinking about architecture: image retrieval from API, web request for game, CV pipeline
        - Thinking about these as separate scripts - image_retrevial.py…
            - Pros: easy to implement as why have files now, easy to maintain because it will all be centralized
            - Cons: if we think there will be small dependencies, difficult with growth
        - Multiple modules can have dependencies which live inside the modules, these don’t have to live in the same file
        - What endpoints should be: ex. game_query query: sheet letter, date, start time

Major decisions:

- UI awaiting API from Andy
- Next week: trying to connect with Andy's new API (understand lag time), module structure with API endpoints, demo of Christians work

Upcoming actions:

- Send built out status report to Andy this week
