

Project 31: Rock Creek Curling

Meeting 2 Minutes: Sponsor

Date: Sunday September 15th, 4:00-5:00 pm

Attendees: Brooke Nelson, Brooke Seifert, Katie Miller, George Bauer, Jaron Barrett, Christian Mesa, Andy Carle

Missing: N/A

Upcoming meetings: Thursday at 5:00 via Zoom

Key Discussion Points:

- Expectations:
 - Not looking to do a waterfall outline
 - No existing format for the charter (follow a statement of work format)
 - User-centered design process: using prototypes from Claude or Figma
 - Target audience for testing: people relaxing at Rock Creek
- Ownership:
 - Little pieces done by Andy for Rock Creek owned by Rock Creek right now
 - Open sourcing so that RC can continue working on it, Andy, Mikhail, Will interested in being involved with writing code
 - No desire from Rock Creek to own but interested in combinations of Rock creek and CU branding on it
- Resources:
 - Mikhail: curling.gg (strategy board and simulation engine), potential API access
 - Will: computer vision resource if we want to generalize our vision models, making sure our tool isn't too specific to our video
 - USA curling: non-profit that organizes all curling in the country, they certify curling coaches, accessible for coaching questions
 - Facility: ability to install additional cameras, less access next two weeks
 - Easily set up interviews on zoom with curlers, lots of excitement around this project in the sphere
 - Access to people at the bars at rock creek
 - Andy: Embedded systems development, curling knowledge base, product development, office 531
- Fundamental question: using this overhead video footage as the raw input, what can we build
 - Generalizing is really hard question, we can choose if we want to be involved in that
 - Milestone one: flipbook between shots with off the shelf cv stuff
 - Milestone two: export a scenario to the simulation tool (curling.gg)

- Potential pathways:
 - Figuring out whether you made your shot based on the shot caller, automatically parsing the scoreboards and automatically updating Rock Creek's website
 - Reach Product: coaching tool being flip through shot by shot, facilitate discussions the team, suggestions for shots

Major decisions:

- No existing format for the charter (follow a statement of work)
- MVP: web app to click through each end state after every shot for both sides of the house
- User-centered design approach
- Andy is available via his office and email most days, schedule team meetings as needed

Upcoming actions:

- TA meeting with DJ on Thursday at 5:00 via Zoom
- Project Charter workday during Sunday's meeting
- Find time to go to Rock Creek and learn to curl
